Kelly,

First of all, I am so sorry that my auto-address function keeps looping you into this case instead of Kathy Wright at LDEQ. I will try to keep closer tabs on this. But yes, please delete if you get any more.

On your substantive question, I am not involved with the FMC case any longer but am copying Andy Boyd on this email, who is in Region X and hopefully can consult with the appropriate people in the CERCLA program and have someone respond to your inquiry.

Thanks, and enjoy your weekend.

Deborah

Deborah, I have gotten these but have been deleting them. I don't think you want me on this list unless you think this might be helpful for the JR Simplot one that is being worked on.

ON a side note, I would like to ask you a question about the FMC facility. I know you first worked on this with the Tribes and EPA. How come EPA and FMC are allowed to spread contamination (slag) across the reservation? I am attaching a letter that was sent to EPA where the Tribes asked for a Government to Government consultant which we were denied.

Thank you for taking the time to read this and hopefully can shed some light as to why contamination can be spread across a Superfund Site.
Kelly C. Wright

Oh, please let me know if I should be reading these or deleting?
